

February 2007 – Silwood Technology and Grandite forge close relationship to deliver Enterprise Application metadata intelligence to the SILVERRUN customer base.

ASCOT, Berkshire U.K., and QUEBEC, Quebec, Canada - February 26th, 2007 - Silwood Technology Ltd and Grandite today announced a direct interface between Silwood Technology's world-leading Enterprise Application metadata analysis tool Saphir and Grandite's SILVERRUN tools for advanced data, process and UML modeling.

Saphir enables users to explore, document and visualize data structures for large Enterprise Application packages like SAP, SAP BW, PeopleSoft, JD Edwards and Siebel. The new interface, which is immediately available, creates accurate representations of these Enterprise Applications' data models in SILVERRUN.

Graham Simpson of Silwood Technology:

"Saphir continues to dominate the Enterprise Application metadata intelligence market space and this relationship with Grandite marks another step in our tools vendor program to extend Saphir's reach to all parts of the data modeling community.

We are pleased to have forged such a close partnership with Grandite based upon mutual recognition and respect for each company's market knowledge and strengths.

At the technology level we have collaborated with Grandite's R&D team to enable them to build a seamless interface between our product sets.

At the marketing level we are working with Grandite to help them bring the solution to the SILVERRUN market, in response to the demand shown from their global customer base.

We look forward to a long relationship with Grandite as our technologies continue to develop and expand."

Axel Troike, President of Grandite:

"We have long recognized the challenge that Enterprise Applications pose for our customers within their overall data modeling and metadata management environments.

Combining Saphir's unique ability to provide in depth enterprise application metadata intelligence with SILVERRUN's advanced data modeling functionality is an important part of our commitment to deliver comprehensive solutions for true enterprise wide application integration to our customer base.

We are particularly delighted that Silwood Technology have allowed us to couple Saphir and SILVERRUN in a way that enables our customers to design and integrate Enterprise and individual applications using one modeling tool.

The SAPHIR-for-SILVERRUN solution which unfolds its full strength with the new version of SILVERRUN RDM Relational Data Modeler will give our customers a head start in managing their applications."

About Grandite

Grandite is the supplier of the SILVERRUN tools for data, process and UML modeling. Having been on the market for more than 15 years, SILVERRUN tools are used by organizations of all sizes and business branches in more than 30 countries.

Grandite markets SILVERRUN both directly and via regional distributors and is Silwood Technology's exclusive partner for the SAPHIR-for-SILVERRUN solution.
